

ABSTRACT OF THE DISCLOSURE

A dental mirror scratch resistant sterilizing bag is provided with a two compartment construction utilized for allowing dental mirror(S) and other instruments to be sterilized, stored, transported and viewed for later usage without scratches. The pouch provides one heat seal to divide the two compartments of a single sterilizing bag to separate the dental mirror(S) in the smaller compartment from other dental instruments in the larger compartment in a single set-up. The pouch includes a first top member and a second bottom member. One adhesive strip and one adhesive coating are provided below the removable liner strip to be removed and discarded prior to usage. The bottom heat seal has a chevron configuration shape.
